Smooth migration from BPCS/LX to SAP without operational downtime

Dear!

Following up on my previous note, **many organizations running Infor LX or BPCS** eventually face the challenge of **migrating to a new ERP platform**, such as SAP.

An **ERP migration** is a massive undertaking. Internal teams often **struggle to manage the dual burden** of **keeping the current business running** while simultaneously preparing for the new system.

This is where we step in. We provide comprehensive project management and technical migration **support tailored specifically for BPCS and LX** environments:

- **Data Extraction and Provisioning:** We clean, structure, and extract your historical legacy data, delivering it ready for your new system.
- **Business Continuity:** Our experts take over your day-to-day BPCS/LX and IBM i operations, freeing up your key internal staff to focus 100% on the new system implementation.

By bridging the gap between **your old system and your new strategy**, we **ensure your migration project stays on time** and **on budget without risking daily business disruptions**.

Do you have a few minutes to explore how we can support your upcoming IT roadmap?

Best regards,
Helmut Friesl/CEO
